The Kaak Group North America Inc. to Represent Ziegler Ice machines

Lithia Springs, GA - The German company Ziegler Ice Machines since 1957 has specialized in the manufacture of ice machines, selling their equipment in more than 140 countries. Ziegler (Z-gra) holds several ice machine patents which have helped it become the market leader in the manufacture of flake and chip ice machines in all sizes. An example of their market strength is reflected in the fact that they provide the drive system for the Manitowoc flake ice machines, the #1 supplier to the food service industry in America.

For the baking industry, Ziegler designs high quality “chip” ice machines that produce an exact amount of very fine ice which can be automatically dosed into 1 or 2 mixers. Another popular product is Ziegler Streamice®, that can automatically dose a mixture of liquid ice and water into 1 or more mixers.

For the Kaak Group North America Inc, the addition of Ziegler Ice Machines to its delivery program is another important step in becoming a full line supplier. The company now can deliver everything from ingredients storing dosing and cooling, mixing, dough processing, product handling baking, cooling and packaging for large or small bakeries.

The Atlanta based Kaak Group North America will be responsible for the service and spare parts of the Ziegler Ice Machines in the USA. For more information contact the sales department at (800) 367-2504.
